1 Promote 4 areas A, B, C, D

This step shows a hand using a yellow squeegee to smooth the adhesive on the rear window. A callout box lists the following instructions: "1. Clean the rear window thoroughly with a glass cleaner and a soft cloth. 2. Peel off the adhesive backing from the shade. 3. Apply the shade to the rear window, starting from the top edge and working down. 4. Use the squeegee to remove any air bubbles and ensure the shade is properly adhered. 5. Trim the shade to fit the window. 6. Repeat the process on the other side of the rear window." The right-hand image shows the rear window with four circular markers labeled A, B, C, and D indicating the areas to be prepared.

2 Attach adhesive clips

This step shows a hand attaching a black adhesive clip to the edge of the rear window. A callout box shows a close-up of the clip. The right-hand image shows the rear window with the four circular markers A, B, C, and D, and the clip is being attached to the top edge.

3 Insert shade and attach to clips

This step shows the shade being inserted into the rear window. A callout box shows a close-up of the shade being inserted. The right-hand image shows the rear window with the four circular markers A, B, C, and D, and the shade is being inserted into the window.

4

This step shows the shade being attached to the clips on the other side of the rear window. A callout box shows a close-up of the shade being attached. The right-hand image shows the rear window with the four circular markers A, B, C, and D, and the shade is being attached to the clips.

Repeat on other side

4

This step shows the shade being attached to the clips on the other side of the rear window. A callout box shows a close-up of the shade being attached. The right-hand image shows the rear window with the four circular markers A, B, C, and D, and the shade is being attached to the clips.
